Hello,

What is the easiest way to write all the variables saved in the main IDL level to a *.csv file? They are all vectors, but don't necessarily have the same number of elements. I could use:

```
WRITE_CSV, Filename, Data1 [, Data2,..., Data8] [, HEADER=variable]
```

... for groups of vectors with the same number of elements but this wouldn't be very practical given the number of variables I'm dealing with. I was wondering if there is a more automatic solution for this.

Thanks!
