Well, you could use `lasti = [9223372036854775807LL]` to define an "index" that will give you the last array element in most cases.
(Until someone sets `COMPILE_OPT STRICTARRSUBS`, at least)

```
IDL> print, array[lasti]  
      9
```

And possibly, God kills a kitten everytime someone uses this abomination.
