Subject: A simple vector - array operation Posted by francois[1] on Wed, 12 May 2010 15:10:54 GMT View Forum Message <> Reply to Message

Hello,

Let say that I have an array A of 25 columns by 100 lines and a vector V of 25 elements.

I want that each line of A takes the value of V such that:

for i=0, 99 do begin

 $A[i,^*] = V$

endfor

What would be a fast way of doing this without using the FOR loop?

Thank you,

Francois.
