Ok, this is driving me nuts. I am getting this error more often these days, and always avoid it by writing my own loops or so. When I use an IDL lib function, I often get this error:

'Keyword TNAME not allowed in call to: DATATYPE'

What is this??

Even with the following example, straight from the HELP:

```
X = [0.0, .12, .22, .32, .36, .40, .44, .54, .64, .70, .80]
F = [0.200000, 1.30973, 1.30524, 1.74339, 2.07490, 2.45600, $
2.84299, 3.50730, 3.18194, 2.36302, 0.231964]
result = INT_TABULATED(X, F)
print, result
```

The error occurs....

J
