Unless the manuals for P&C are better than the ones for the command language, RTFM isn't much of an option. One "tong & hammer" approach we might take to plot this would go as follows:

```
WAVE> points = fltarr(2,25000)
WAVE> points(0,*) = "x-values"
WAVE> points(1,*) = "y-values"
WAVE> plot, points(0,*), points(1,*), Psym = 3
          ^^^^^^^
```

Plot data using points only

```
WAVE> oplot, normal curve
```

where the "x-value" and "y-values" are from your data points.

Of course, if there is a better way, I would like to see it, too.
