Why are my PS files getting so large? I'm doing a simple plot of ~25 points and the file size is 7.5MB!

Here's my code:

```
DEVICE,file=string('cluster1.ps'),bits=8
plot,dist,fe,psym=8,yrange=[-0.2,0.3],ytitle='[Fe/H]',xtitle='Distance
(pc)',charthick=4,thick=3,symsize=1,ystyle=1
oplot,x,two,linestyle=2
oplot,x,three,linestyle=2
oplot,x,half,linestyle=2
xyouts,500,two+.005,'2X',charthick=4
xyouts,500,three+.005,'3X',charthick=4
xyouts,500,half+.005,'0.5X',charthick=4
```

```
temp=findgen(11)+1
device,/close
```
