
Subject: Vendor daemon is down

Hello all,

Upon starting up IDL today, I received the following error message:

LICENSE MANAGER: The desired vendor daemon is down.

Check the Imgrd log file, or try Imrread.

Feature: idl

Vendor:Host: lm1.license.[my school].EDU

License path: /usr/local/itt/idl70/./license/license.dat:/usr/
local/itt/
icense/*.lic:

What's the fix for this? Is it even happening at my end, or is my school's license server down? I downloaded a new license.dat, but that didn't help.

Thanks!
