To subset using map coordinates, you first need to convert your map coordinates into pixel coordinates for the image of interest. Create an array containing the lat/lon coordinates for a box containing Italy (or whatever map subset you want), and push these through `ENVI_CONVERT_FILE_COORDINATES` to retrieve their respective pixel coordinates. Then construct your DIMS vector to `RESIZE_DOIT` by finding the min and max boundaries of the returned vertices (in pixel coordinates) that form a polygon.
