Subject: Plot Widget under IDL
Posted by Markus Heuer on Mon, 30 Sep 1996 07:00:00 GMT

Hello

does anybody know of an IDL widget allowing to view and
print the most common varieties of data plots, including
a versatile interface allowing to import data in various
formats (similar to Microsoft Excel's capabilities)?
Of course, this can all be implemented in IDL's powerful
programming language, but this take lots of time...
Such a ready-to-use plot utility seems to exist for PV-WAVE.
Has anybody implemented a similar thing in IDL?

Thanks for any useful hints
