---

I have an array in this format

OLR        FLOAT    = Array[720, 144, 144]  
where 720 = t  
144 = x and y

I need to create an array for particular extracted values of this  
array where say x has values from 1 to 5 and y has values from 1 to 5.

I'm just not sure on how to perform this, a do loop perhaps? sorry I  
am a complete beginner!
