---

```
## example of my_program.g ##
```

```
.r routine_a
```

```
.r routine_b
```

```
.r routine_c
```

```
.r my_program
```

```
my_program
```

```
#####
```

```
@my_program.g
```

```
resolve_all
```

```
save, file='my_program.sav', /routines
```

And then, in the bash file:

```
idl -rt=my_program
```

I don't know if I understand your problem but I never had problems doing this.

natha
