Subject: Problem with creating executable files for scripts using envi functions

Posted by laureroupioz on Wed, 09 Jun 2010 19:03:46 GMT

Dear all,

I'm turning myself to you, hoping you can help me with this problem.
I succeeded in creating functioning executable files (.sav) for
scripts independent from ENVI. However, I'm now trying to create an
executable file for a script calling some functions from ENVI like
mosaic_doit and I run into troubles. When calling the executable file
via idlrt from the command line or when clicking in the file itself I
can see that it is starting up idl and then ENVI but none of the
script actions are performed. When I run the script through the GUI it
is working fine… I tried several possibilities like adding or not
"envi, /restore_base_save_files" to my script. Compile it when envi is
activated or not, nothing works…
Do you have any idea about it?

Thank you.

Laure
