Subject: contour noise problem
Posted by hethomas on Wed, 09 Jun 2010 11:15:22 GMT

I am contouring some data with lat,lon coordinates. The data are
quite noisy and therefore a lot of points are being contoured which
are highly dispersed and outside my main region of interest. I can't
use a minimum threshold for these as this will eliminate too much of
my actual data. Does anyone know of a way to tell contour only to
join points which are within a certain distance of each other? Thanks.
