Subject: idl license path.
Posted by R.G.Stockwell on Thu, 17 Jun 2010 17:33:56 GMT

I have a configuration question. On a unix machine, how can I find
out what the license path is, and how do I change the license path (in a
.cshrc file perhaps,
an environment variable?).

A colleague is having a problem, and the easy fix (well, I am guessing it is
the easiest)
would be to point the path to the existing license file (which it does not
currently do).

cheers,
bob
