Is this the right place to ask about PV-Wave P&C? Please give me advice
for making multiple plots. I have a file of 25,000 points I want a scatter
plot of. I also have a file of 600 points that show the nominal curve.

I can plot each one separately ok but I can't figure out how to combine
them into one view. What I want is the 25,000 points scattered about the
nominal curve, all on one graph. How do combine these into one view. If
the answer is RTFM then please include a page or section number from the
P&C manual.

Thanx for all help.
