I want envi files to input in itpfind (kennedy and cohen 2003) idl code for image tie point. But the itpfind code needs header file with following information;

BANDS: ok

ROWS: ok

COLS: ok

DATATYPE: ok

UL\_X\_COORDINATE: ?

UL\_Y\_COORDINATE: ?

LR\_X\_COORDINATE: ?

LR\_Y\_COORDINATE: ?

PIXEL\_WIDTH: ok

PIXEL\_HEIGHT: ok

Could anybody suggest me how to put (?) information in envi hdr file?

Any help will be much appreciated.
