Hi Everyone,

I need to make a graph with the same properties that Coyotes second
Colored Line example has:
http://www.dfanning.com/graphics_tips/coloredline.html
(the example at the bottom of that page)
except that I have three data sets- x, y, and z instead of just x and
y. I want to have the points be colored sequentially in value based
on the value of z instead of the value of y.

How would I need to change his code to do this?

Thanks,
Ally
