Hi. I have a real easy stupid question:

I am using the CW_ANIMATE widget and pixmaps. What I would like to do is save the pixmaps to a file, so that they may be restored and played at a later date. So, I wrote the code. Now, while I am still in my program I restore the file and fine, no problem. However, if I close IDL and start fresh, I get a message just as CW_ANIMATE starts loading the pixmaps to the effect of:

"Window number 33 out of range or no more windows"

Can anyone explain the problem and/or how to fix it?

Thanks!

Gadi
