Hi - I'm trying to make a program which automatically runs through 100s of images (MODIS Fire data) and extracts data at a particular point. The program works fine where there is data to extract (in the case below, when there is data in FP\_Sample) but halts for an image where there is none with message "Array dimensions must be greater than 0".

Extract of code is:

Is there a way to test the size of the variable (in this case Sample) and if, say it's -1 (no data) then skip the last line of this code?

Would very much appreciate any help.

Matt
