## Subject: Writing in IDL at the same line in the screen
Posted by lila hadji on Mon, 26 Jul 2010 15:42:34 GMT

Hello everybody!

I want to create like a progress bar with IDL console, where the line
is completed progressively while the process is executing.
Unfortunately, print command, returns to a new line immediately.  Is
there any tips to  be able to rewrite on the same line on screen,
please?
I appreciate your help in advance!

Thanks
L.H.
