Hi,

I have a program which I need to run for several data sets (which are in different different folders), Since the number of folders in which the data sets present are huge in number, it is very difficult to go to that folder in which the dataset is and then copy the program to that particular folder and run it(orelse i need to copy the location of the dataset in the program, which is also a difficult task). So please give some ideas to run the program for all the datasets in different folder at a single stretch.

regards

sid
