Doug,
EDG and Analyst are the most pressing ones, but I really want all PDFs in the help documentation.

A good help system is extremely important for usability, especially for new users. I have other software packages I avoid as much as I can because I cannot find commands in a timely manner...

>> I don't know if this'll help much, but note that on Mac one can open multiple PDFs at the same time in Preview, as if they're all a chapter in one big book. That might make searching a bit easier. Links should work for the most part. I just tried Adobe Reader on Windows and am feeling a bit of pain... ;-)

As I remember, through all the recent versions of the help system, it was always possible to search everywhere from a single place. Now, one needs to know that besides the help, there are those separate pdfs to look into. Besides the inconvenience (I am probably going to use Acrobat to join them into a single file, so that they become a bit easier to use), it is not obvious that these separate files exist - I only found out from this thread, and I was already missing some of the content I knew was present in previous versions. So many users might not find what they need just because it does not show up in the help system.
