When I add the VOLUME_DIMENSION keyword to iVolume and the array has values less than 1, I can't move an image plane (created by Operations-> Volume->Image Plane) around on the volume.

```
;works with Image Plane
ivolume,findgen(50,50,50),rgb_table0=33,/auto_render
;doesn't work with Image Plane
ivolume,findgen(50,50,50),rgb_table0=33,/
auto_render,volume_dimension=[0.1,0.1,0.1]
```

I tried to look around for a delta step property in the Image Plane that could fix this, but I couldn't find any (or any documentation on it, really). Any ideas?
