Subject: Setting UNIX 'group' from IDL?

Hi All,

I've searched through the manual and as far as I can see there doesn't appear to be a way to set the group of a file (on UNIX system) from IDL. Using `file_chmod` I can change the UNIX permissions, and using `file_info` I can see whether the file has a group specified, but I can't seem to be able to specify what group I want a file to belong to.

Does anyone know a way to do this in IDL?

Thanks.
