
Subject: IDL syntax highlighting in other documents

Hello all,

I'm writing a lot of IDL code for my university research projects and my PhD thesis and therefore want to include some of the code in other documents. I'm writing these documents mainly in LaTeX and HTML. I have found a number of utilities that will perform syntax highlighting on code for me (such as Pygments - <http://pygments.org/>) but none of them seem to support IDL.

Does anyone know of anything like this that does support IDL? I was thinking that I might have to write one, but I'm not sure if my skills are up to that!

Best regards,
