
Subject: colour-filling contours over maps

I'm guessing this is an FAQ, but I couldn't find an faq posting - maybe our news reader doesn't keep old enough news?

Is there a way of filling contours which have been plotted over a map?

I feel I should be able to do it by setting the edge values to zero (or something) that will close them and then all should be fine, but I don't seem able to do it - should I persevere? or is there a cleverer way?

These contours are open at each side of the map rather than just like a semi-circle with one open edge, does this make a difference?

Can anyone help me? The manual seems to just say that you can't do it, but I find this difficult to beleive?
