Hi guys,

I'm working in a new linux 64b machine and I have a problem drawing an IDLgrVlew.

% IDLGRSRCDEST::DRAW: Rendering context too large. Maximum size  
-181406674x32755.

% IDLGRSRCDEST::DRAW: Unable to acquire device context.

Do you know what's happening ?

I don't have this problem in other computers.

Thanks,

nata
