Hi

IDL8.0 crashes when I try editing the values of a widget\_table. It doesn't seem to happen under windows. Does anyone experience the same problem (test code below)?

My version:

{ x86 linux unix linux 8.0 Jun 18 2010 32 64}

Test code:

```
pro test_event,ev  
end  
  
pro test  
base=widget_base(title='tst')  
table=widget_table(base,value=fltarr(4,2),/editable)  
widget_control,base,/realize  
xmanager,'test',base,/no_block  
end
```
