I've made a few updates to my IDL tools. If you're interested, check out

http://cimss.ssec.wisc.edu/~gumley/index.html

under "IDL Local Resources".

Cheers,
Liam.

IDL Frame Tools:
The tools work in 24 bit mode as well as 8 bit mode,
SF now loads the color table before restoring the image for a frame,
FSET now reports the number of colors allocated.

IDL Image Mapping Tool:
Now works properly when Postscript output is enabled,
Added XOFFSET, YOFFSET, XSIZE, YSIZE keywords,
Map projection may be pre-defined (Mercator will be used if no map
projection exists),
Added MISSING and NOBORDER keywords.

IDL HDF SDS Tool:
Added READ_ALL keyword (useful for non-interactive mode with SDS
keyword).
