Hi all,

with ITTVIS, but I thought that someone here might have some ideas.

ISV files generated in IDL 7 and viewed in IDL 7 work fine.

causes the objects to stretch and rotate at the same time.

created in IDL 8 by using iSurface here

http://csrp.tamu.edu/downloads/idl/test_rotate.isv.zip

If you select the freehand rotate tool and click on
the white space around the yellow surface, it seems to

and try to rotate, the whole rendering stretches in unexpected ways.

We have not been able to determine whether this is a problem with the ISV
files or possibly with changes made to the iTools in version 8.
