
Subject: REPLICATE question

I would like to divide an `arr1(n,n,m)` by an `arr2(n,n)` and be able to obtain an `array(n,n,m)`. I suppose there is a way to avoid the for statements.

I had the idea to transform my `arr2(n,n)` in an `arr2(n,n,m)` where the m-elements are all the same but REPLICATE does not work with the arrays.

Does some-one have an idea that could help me?

Thanks.
