I can't seem to get tiffs written out in color. Silly, but true.

```
IDL> write_tiff,'title',(array[*,*,2]),/float
```

I get a grey scale image even when I've set device,decomposed=0 and loaded a color table (39). The resulting file is larger compared to the black and white tiffs I produced with bytscl'ing', but it is not in color. Any suggestions?

Thanks!
