Subject: Bar plots in IDL
Posted by lorenzo on Fri, 10 Sep 2010 17:35:13 GMT

Hi;
I am making some bar plots using the bar_plot IDL routine, but I have
found that there is little control over the axes data range as well as
the size of the tick marks, for example.
Does anybody know how to control these or know about a different bar
plot program in IDL that allows one to do this?
Thanks in advance.

Lorenzo.
