---

Hello,  
Having trouble allocating a few-hundred mb array that works in IDL  
6.4,7.1 - new setting/pref somewhere I'm missing?

IDL Version 8.0, Microsoft Windows (Win32 x86 m32)  
IDL> data = LONARR(10000, 10000)  
% Unable to allocate memory: to make array.  
    Not enough space  
% Execution halted at: \$MAIN\$

thanks, Tom
