Hi,
I have a Linux machine on which the IDL 8 workbench crashes when I
call up Windows -> Preferences or when I click the down-arrow next to
"IDL current directory" in the console view. The crash message reads"

#
A fatal error has been detected by the Java Runtime Environment:
#
# SIGSEGV (0xb) at pc=0x00007fe3846b3294, pid=25954,
tid=140616200955664
#
JRE version: 6.0_17-b04
Java VM: Java HotSpot(TM) 64-Bit Server VM (14.3-b01 mixed mode
linux-amd64)
Problematic frame:
C [libgdk-x11-2.0.so.0+0x67294]
#
An error report file with more information is saved as:
/project/ampere2/code/idl/utility/netcdf/hs_err_pid25954.log
#
If you would like to submit a bug report, please visit:
http://java.sun.com/webapps/bugreport/crash.jsp
The crash happened outside the Java Virtual Machine in native code.
See problematic frame for where to report the bug.
#

IDL code itself seems to execute fine and also the command line
version is working without problem. The Linux version as per /proc/
version is:

Linux version 2.6.32.13-0.5-default (geeko@buildhost) (gcc version
4.3.4 [gcc-4_3-branch revision 152973] (SUSE Linux)) #1 SMP
2010-07-20 14:12:19 +0200

I have been working this with tech support but it seems they are
running out of ideas. So I was wondering if anyone in the community
had similar problem on SUSE Linux and if there is an easy fix for this
issue.

Haje
