Oh, oh! If the user makes the mistake of clicking and dragging in this window. (The default behavior of ALL new graphics windows, I guess.) Then the graphic jumps back to a massive map projection of the entire Northern hemisphere with a tiny image in the center. And it appears there is no way to go back to what I was so careful to construct.

Cheers,

David

P.S. Let's just say, keep your cotton pick'n hands OFF my graphics windows!
