One wrong statement in the loop:

```
> for i = 0, n1-1 do begin
>>>   w = rebin(w1[*],i], nv, n2) ; Makes nvxn2 matrix
>   p = w*w2                ; Performs number 3 above.
>   SF[i,*] = dt # p
> endfor
```
