I have to admit that I did not understand this proposed use of  
REPLICATE:

>> sometimes (replicate({temp:input},newsiz).0) is faster then rebin

But it brought me a related question in mind: does IDL have a  
"REPLICATE" function for vectors instead of scalar values? I am using  
REBIN, but REBIN is thought for more advanced uses and probably  
suboptimal for a "replicate-like" use... right?
