
Subject: Two DE Console questions

I've been using the DE since v7, but I just haven't found a solution to these bits. Any ideas?

* The v8 Console (v7 command line box was the same, IIRC) only accepts a subset of the editing keys that work in Editor views. I use the Emacs set, but the standard line moving shortcuts like C-A, C-E, etc. don't work. The Mac specific ones like Cmd-left/right arrow do. I've hunted through the Keys and Console preferences for a solution, but haven't found anything that works. I've tried making a binding with When: "IDL Command Line" or "In Console View", but they don't enable the key.

* Is there a place to add the full command line that runs when you hit the "Run" button? By default it's just using the routine name for the routine you're currently editing, which isn't very useful most of the time...

Thanks for any tips...
