Folks

Hi;

I read some data like this:

```
-1.8750000000 78.8750000000 1.317
-1.8750000000 78.6250000000 1.284
-1.8750000000 78.3750000000 1.216
-1.8750000000 78.1250000000 1.148
-1.8750000000 77.8750000000 1.080
```

.....

And when I want to write it,

```
openw,1,'C.dat'
```

```
z=transpose(reform([data[0,*],data[1,*],data[2,*]],n_elements(data[2,*]),
3))
```

```
printf,1,z
```

```
close,1
```

it gives me something like this:

```
-1.87500  0.897000  71.6250
 78.8750  9.87500  0.645000
 1.31700  70.3750  21.8750
-1.87500  1.01300  71.3750
 78.6250  9.87500  0.538000
 1.28400  70.1250  21.8750
```

.....

Will you please help me out whit this?

Cheers

Dave
