HIST_ND is not my program (although God knows I use it a lot!).
I didn't honestly realize it was in the Coyote Library until
I was starting to clean things up just recently. I probably
put it there so I would always have it accessible.

But this is a program written by JD Smith. It is available
on his web page. I think you should get it from there, that
way you always have the latest version.

   http://tir.astro.utoledo.edu/idl/hist_nd.pro

I probably need to update some links to point to this
page. :-)

Cheers,

David

P.S. If JD wants to put this program (or any others)
in the idl-coyote repository, I'm happy to create
a directory for him and give him commit access. :-)
