Subject: Parallel Processing in IDL
Posted by Ammar Yusuf on Mon, 11 Oct 2010 16:35:16 GMT

What's an easy way to use multiple processors in IDL? I have a large program but I want to start with a simple program first. Let's say I have an array of a million integers and I have four processors. I want to add all the elements in this array and output it. I could split the array into four parts and give it to each processor right? Is this possible? How would I do this? Thanks!
