It seems that I just got bitten by this new behavior. A simple example that shows the problem:

```
IDL> w=window()  
IDL> w.title='a'  
% Expression must be a structure in this context: OTITLE.  
% Execution halted at: $MAIN$
```

So it seems that somewhere in the Graphics routines (I am guessing in a setproperty method) there is a bug, but the error message does not tell where. I will have to start digging now.
