Folks (and Paul van Delst, in particular),

We have created an official "released" version of the
Coyote and Catalyst Libraries in the public SVN
repository. Users concerned with stability can
download from the release versions. On-going development
will continue in the trunk versions.

We don't currently have a release "schedule", but we
expect 2-3 releases per year, as required.

You can learn more here.

http://idl-coyote.googlecode.com/

Cheers,

David
