Subject: alternative to execute available? Posted by rogass on Wed, 13 Oct 2010 13:51:23 GMT

Hi there,

I'm often using the _extra keyword in my routines together with a simple approach to give variables values, like this one

pro test_ex, _extra=ex for i=0l,n_tags(ex)-1l do _=execute((tag_names(ex))[i]+'=ex.(i)') end

If I would call this like: test,/hello,d=dist(10) it would give me within the pro: d with the value dist(10) and hello with the value 1

It works fine, but has one big limitation. I cannot use this technique if I would like to produce working binaries (sav-files). Is there any way to avoid the execute call without having information which keywords were passed to the test_ex routine?

Thanks and regards
