Isn't it interesting how difficult it is to tell if something is a bug or not? It is particularly difficult for me in IDL 8. I had built up some confidence in IDL over the years, so I was getting better at this. Now my confidence is back to about where it was when I was just starting out, all those many years ago. ;-)

Cheers,

David

P.S. Let's just say Coyote's take on this is that it's like being endlessly young and naive. The whole world our oyster again!
