Hi,

I tried the new version and also an older one, but they didn't work!
Everytime IDL shuts down without any comment, it just closes itself.

Well, we have really a lot of code and after some time I realized that
the memory grow up to 1.2GB and after that (maybe) Windows forces IDL
to stop and close. Is there a work around for a lot of code? e.g. call
it several times?

Sebastian
