
Subject: Procedures with variable/dynamic argument list??

Is it possible in IDL to code a procedure using variable/dynamic argument list?? i.e. the number of arguments is arbitrary and the procedure is able to accept them all with some argument array?

Similar to the "va_list" in C or "*args" in Python.

The Print command in IDL is a good example too for accepting arbitrary number of arguments and print them all. Unfortunately, the Print command is not written in IDL, hence no sneak peek of the source code
