anyone consider that, or (as it seems to me) is it entirely impossible to ever get information about the second monitor?

Of note, only one monitor has a task bar.

(I typically am in an extended desktop that is 1600x950 and 1600x1200, i.e 3200 by 2145)

IDL> help,/device

Current graphics device: WIN

Screen Resolution: 1680x945

(even when running on the other monitor)

cheers,
bob
