Subject: real screen size. multiple monitors. Posted by R.G.Stockwell on Thu, 28 Oct 2010 18:46:55 GMT View Forum Message <> Reply to Message

anyone consider that, or (as it seems to me) is it entirely impossible to ever get information about the second monitor? Of note, only one monitor has a task bar.

(I typically am in an extended desktop that is 1600x950 and 1600x1200, I.e 3200 by 2145)

IDL> help,/device

Current graphics device: WIN Screen Resolution: 1680x945

(even when running on the other monitor)

cheers, bob
